LIMITING CONDITIONS

► Toggle Positions:

- determined by the colinearity of two of the moving links.
- Will not allow further input motion in one direction from one of its rocker links

(a) Non-Grashof triple-rocker toggle positions

4-toggle positions

(b) Grashof crank-rocker stationary configurations

2 toggle positions

► Point

Graphical Synthesis - Motion generation for the prescribed pose

► Pose

Graphical Synthesis - Motion generation for the two prescribed point

► Rig

LIMITING CONDITIONS

► Toggle Positions:

- determined by the colinearity of two of the moving links.
- Will not allow further input motion in one direction from one of its rocker links

(a) Non-Grashof triple-rocker toggle positions

4-toggle positions

(b) Grashof crank-rocker stationary configurations

2 toggle positions

Two-Position Synthesis

Two categories:

- ▶ Rocker output
 - Grashof
 - Non-Grashof
- ▶ Coupler output (complex motion).

Two-Position Synthesis - Rocker output

Two-Position Synthesis - Rocker output

Design a fourbar Grashof crank-rocker to give 45° of rocker rotation with equal time forward and back, from a constant speed motor input

1. Draw the output link O_4B in both extreme cases, and ensure desired angle
2. Draw B_1B_2 chord and extend it
3. Select O_2 on the extended line B_1B_2
4. Bisect line segment B_1B_2 , and draw a circle of that radius about O_2 .
5. Coupler length A_1B_1 , Crank length O_2A_1
6. Find the Grashof condition. If non-Grashof, redo from steps 3 with O_2 farther from O_4 .

Two-Position Synthesis - Rocker output

Design a fourbar Grashof crank-rocker to give 45° of rocker rotation with equal time forward and back, from a constant speed motor input

1. Draw the output link O_4B in both extreme cases, and ensure desired angle
2. Draw B_1B_2 chord and extend it
3. Select O_2 on the extended line B_1B_2
4. Bisect line segment B_1B_2 , and draw a circle of that radius about O_2 .
5. Coupler length A_1B_1 , Crank length O_2A_1
6. Find the Grashof condition. If non-Grashof, redo from steps 3 with O_2 farther from O_4 .

Rocker Output - Two Positions with Complex Displacement. (Motion Generation)

Rocker Output - Two Positions with Complex Displacement. (Motion Generation)

► Design a fourbar linkage to move link CD from position C_1D_1 to C_2D_2

1. Draw construction lines from point C_1 to C_2 and from point D_1 to D_2 .
2. Bisect line C_1C_2 and line D_1D_2 and extend the perpendicular bisectors
3. Draw the output link O_4C in both extreme cases, and ensure desired angle
4. Draw a circle with radius $B_1B_2/2$
The radius is the length of the sixth link.

Rocker Output - Two Positions with Complex Displacement. (Motion Generation)

Coupler Output - Two Positions with Complex Displacement. (Motion Generation)

Coupler Output - Two Positions with Complex Displacement. (Motion Generation)

► Two positions, coupler as the output

1. Draw the link AB in its two desired positions, A_1B_1 and A_2B_2
2. Connect A_1 to A_2 and B_1 to B_2 .
3. Draw two lines perpendicular to A_1A_2 and B_1B_2 at the midpoint (midnormals).
4. Select two fixed pivot points, O_2 and O_4 , anywhere on the two midnormals.
5. Measure the length of all links,
 O_2A = link 2, AB = link 3,
 O_4B = link 4 and O_2O_4 = link 1

Coupler Output - Two Positions with Complex Displacement. (Motion Generation)

► Adding a Dyad to a non-Grashof mechanism.

1. Draw the four bar in both positions
2. Select any point C on link 2.
3. Connect C_1 to C_2 and extend.
4. Select any location on this line for third fixed pivot, O_6 .
5. Draw a circle with radius $C_1C_2 / 2$.
The radius is the length of the sixth link.
6. Measure $O_6D = \text{link 6}$, $DC = \text{link 5}$

Coupler Output - Two Positions with Complex Displacement. (Motion Generation)

(a) Two-position synthesis

(b) Finished non-Grashof fourbar

Completed Watt sixbar linkage with motor

Completed Watt sixbar linkage with motor

- ▶ There is an infinity of driver dyads possible that will drive any double-rocker assemblage of links

Graphical Synthesis - Motion generation: 2 prescribed position

Graphical Synthesis - Motion generation: 2 prescribed position

Graphical Synthesis - Motion generation: 3 prescribed position

Coupler Output - 3 Positions with Complex Displacement. (Motion Generation)

(a) Construction method

(b) Finished non-Grashof fourbar

Coupler Output - Three Positions with Complex Displacement - Alternate Attachment Points for Moving Pivots. (Motion Generation)

Coupler Output - Three Positions with Complex Displacement - Alternate Attachment Points for Moving Pivots. (Motion Generation)

Graphical Synthesis - Motion generation: 3 prescribed position
